

Made by Collard

READY-MIX CONCRETE

We proudly create award-winning ready-mix concrete products using sustainable processes that set us apart from many of our competitors.

AT A GLANCE

BSI quality-assured concrete

- ✓ Ready-mix concrete is produced in line with BS EN206 8500 standards.
- ✓ Products are available to meet NHBC or bespoke standards.
- ✓ Main concrete classes are catered for, such as sulphate-resisting concrete, air-entrained concrete, fibres, pump mixes, self-levelling, and more.
- ✓ Over 300 tonnes of stock capacity onsite holding CEM1, GGBS, and CEM2 grade cement.

We provide an extensive range of options

Our experts are always available to provide technical advice on mix designs, applications, and logistics.

You can order all categories of concrete online for next working day delivery:

- Designated mixes
- Design mixes
- Standard mixes
- Prescribed mixes

Some common mixes ordered include:

GEN0 concrete	ST1 concrete	C16/20
GEN1 concrete	ST2 concrete	C25/30
GEN3 concrete	ST4 concrete	C32/40

Applications for our comprehensive range of ready-mix concrete products:

- For unreinforced foundations and associated groundworks, e.g. strip footings
- For unreinforced foundations in aggressive ground requiring DC-2 to DC-4 concrete
- For kerb bedding and backing, e.g. drop kerbs
- For internal flooring, e.g. domestic garage floors
- For use in agriculture, e.g. livestock floors

Made by Collard

READY-MIX CONCRETE

WHY COLLARD?

Service: We deliver a range of ready-mix concrete products on time, every time because we know how critical it is to keep your projects moving.

Quality: Our concrete is tested via our UKAS-accredited onsite laboratory to guarantee that BSI standards are met. We can also take cubes on your behalf and arrange testing and certification.

Reliability: Our 90m³ per hour capacity concrete plant ensures ready-mix concrete products are always available and delivered to you promptly via our reliable fleet of concrete mixer lorries.

Innovation, recycle to reuse

Our next-generation wash plant can clean up to 250,000 tonnes per annum of inert waste from construction projects to reuse in our concrete products.

We believe we were the first company to produce a range of BS EN206 8500 standard ready-mix concrete products using recycled concrete aggregates.

What our customers say

We have worked with Collard as one of our principle suppliers of aggregates, concrete and waste removal for many years now. They have proved themselves time and time again to be very punctual and efficient with some very challenging environments that we have thrown at them. They meet and often exceed our expectations for budget, availability and resource for all mediums.
